NOAA GOES-R Satellite Fire Detection Capability

#CALFIRELNU is assisting the Rancho Adobe FPD at a commercial structure fire on Stony Point Road west of Petaluma, with three type-3 fire engines and one battalion chief at scene. Engines expect a 1-2 hour commitment time.

10:45 AM · Oct 29, 2023 · 1,393 Views

Commercial structure fire - Sonoma Co. (Oct 29, 2023)

Wildfire Alert Report

Date: 2023-10-29
Time: 14:54:25
Production Date and Time: 2023-10-29 14:55:03 UTC
Primary Instrument: GOES-18 ABI

NGFS alert report

[More details](#)

Possible Wildfire

Basic Information

State/Province(s)	CA
Country/Countries	USA
County/Locality(s)	Sonoma County, CA
NWS WFO	San Francisco CA
Identification Method	Enhanced Contextual (Clear)
Mean Object Date/Time	2023-10-29 14:54:29UTC
Radiative Center (Lat, Lon):	38.290°, -122.720°
Nearby Counties (meeting alert criteria):	Sonoma County (0.00 km)
Total Radiative Power Anomaly	n/a
Total Radiative Power	18.50 MW
Map:	<input type="checkbox"/>

The NOAA NGFS detected the heat from the fire at 7:54:29 AM PDT.

The corresponding alert was generated at 7:55:03 AM PDT

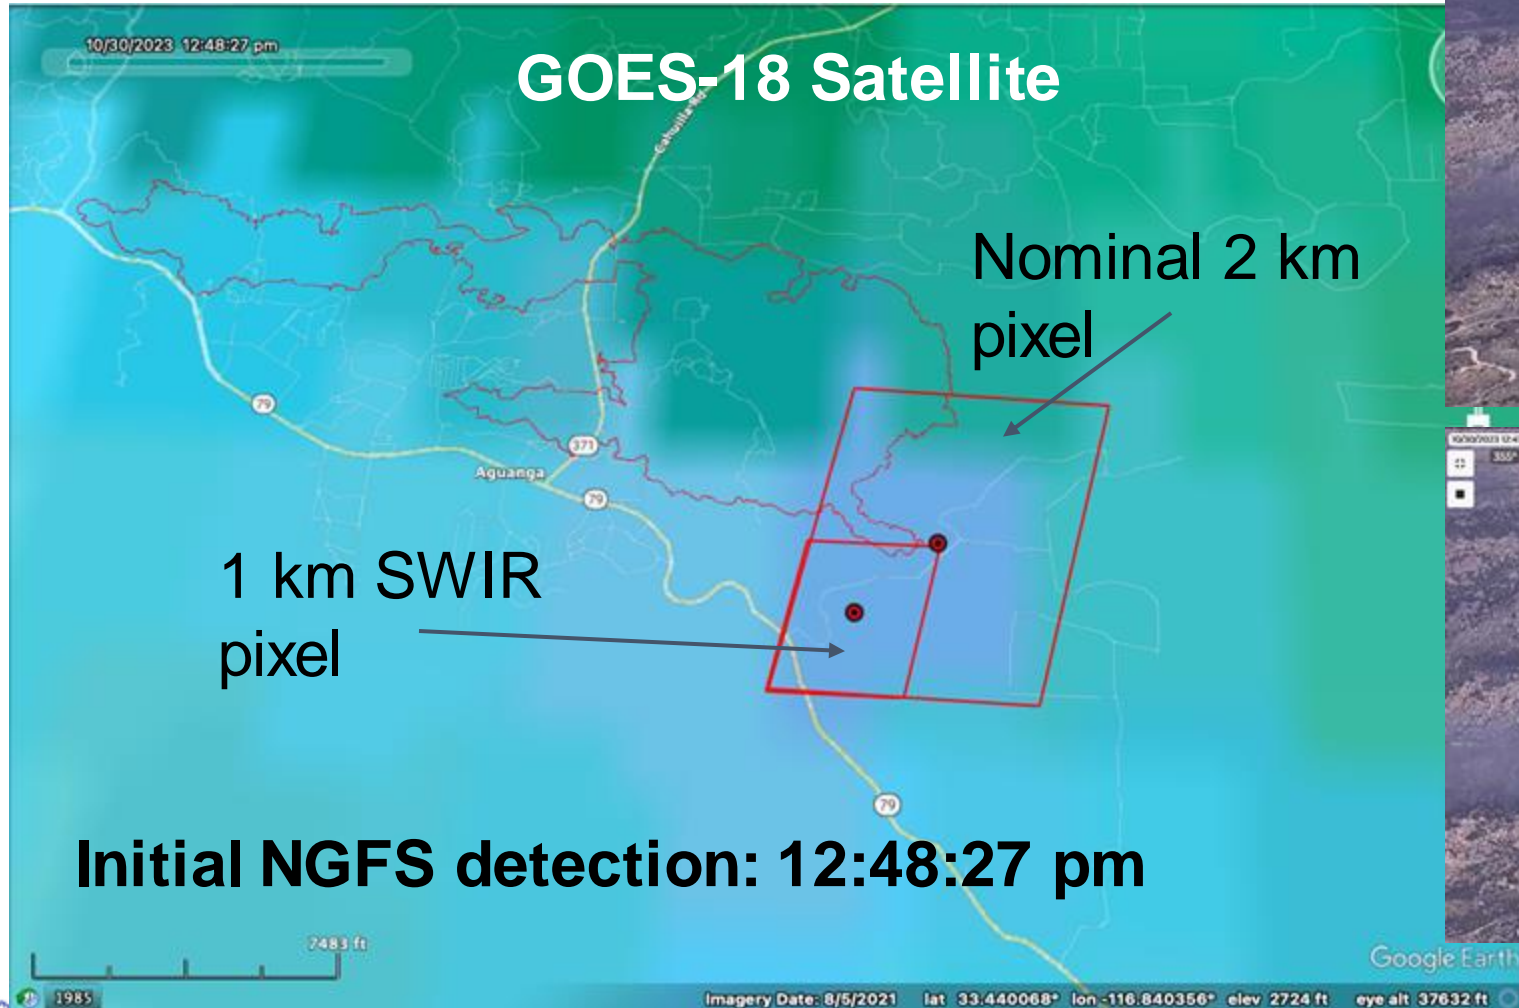

10/29/2023 07:52:30 am PDT

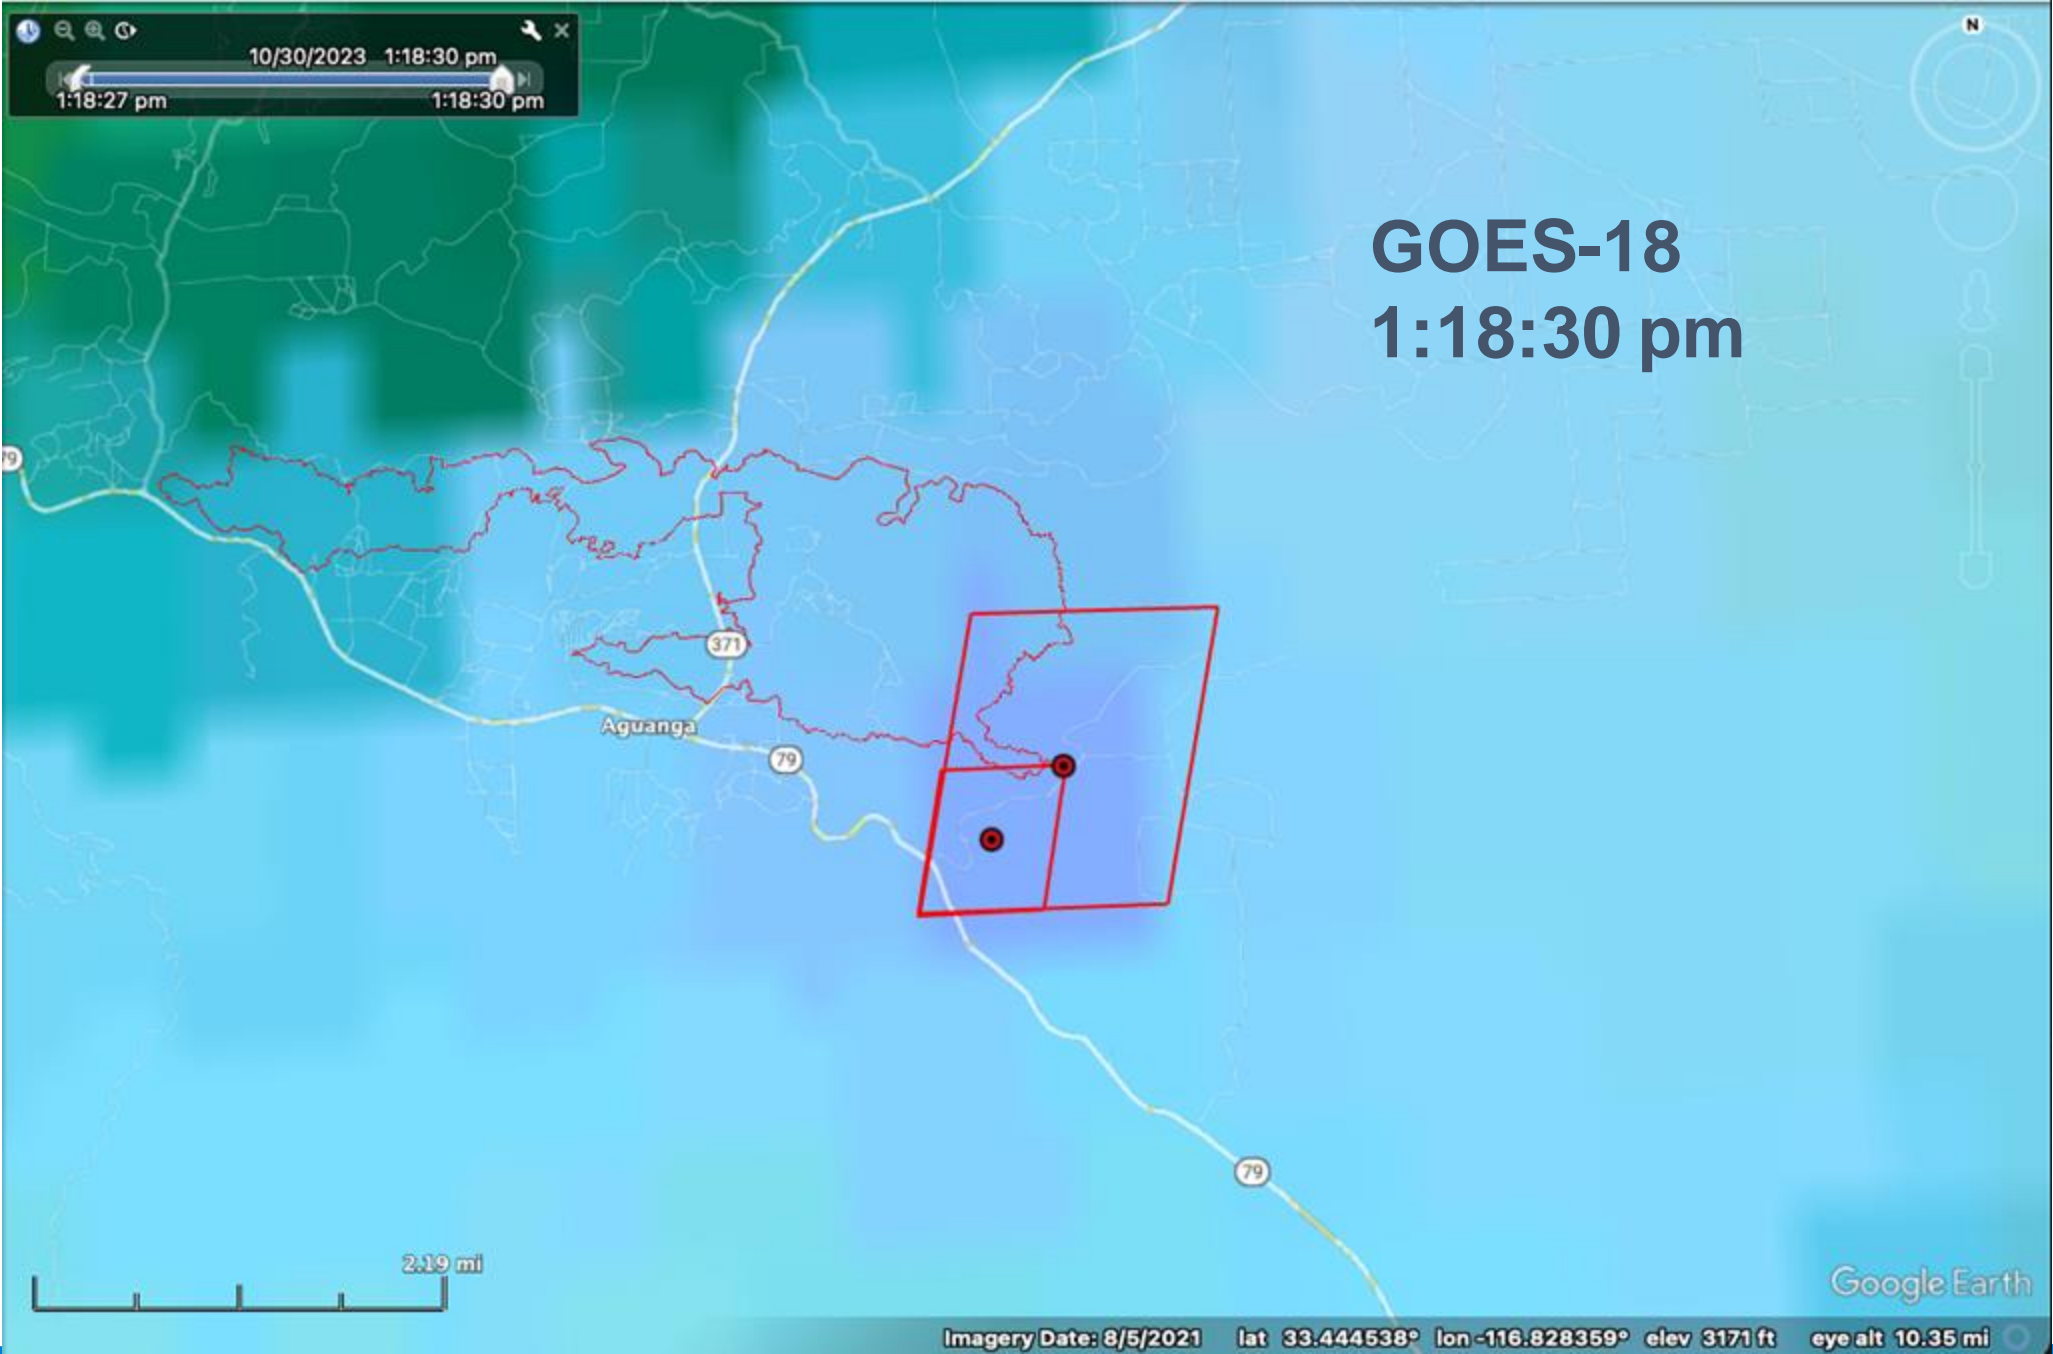

The red box shows the region where the NGFS detected heat.

Highland Incident - Riverside County - Oct 30, 2023

10/30/2023 1:18:30 pm

Pre-decisional information:

No automated system is perfect, so a human expert should verify the alert.

The alert report contains detection metrics and imagery needed to evaluate the automated detection.

Towards a Dedicated Cloud-based Data Portal for NESDIS Fire Products

A beta version of the data portal will be accessible in March

Timely hotspot alerts

Experimental NGFS (v2) alerts are available [here](#). NOAA Fire Testbed and IAA with DOI+USFS will be used to further refine and improve interoperability.

Incident awareness and assessment

Fire Radiative Power (FRP) time series and incident dashboard tools will be demonstration ready later in 2024. Automated pyrocb detection is under dev.

Fire environment forecasting

NGFS products + WRF-SFIRE; [LightningCast UI](#) for wildland fire operations; Development of ML models for lightning ignition and fire intensity prediction.

Event-based data queries

Once the IT security review is complete, experimental NGFS fire products will be available via OGC data services

Smoke analysis and forecasting

Improved satellite-based fire emissions model (RAVE) is now operational in support of the CMAQ and RRFS

Climate monitoring

Ongoing and planned satellite data record re-processing; GHG monitoring

NOAA Fire Weather Request for Information (RFI)

 **NOAA Satellites** 
@NOAASatellites · Follow 

.@NOAA is conducting a Request For Information around commercial capabilities that will aid in #FireWeather forecasting, #wildfire detection and monitoring, and post-fire vegetation recovery.

LightningCast

The ProbSevere LightningCast model uses images of visible, near-infrared, and long-wave infrared channels aboard GOES ABI to predict the probability of lightning in the next 60 minutes.
